User Guide

To use the Save Jimmy program, simply enter the FIRST day that your parnter started her period. THIS IS VERY IMPORTANT. Then enter their typical interval between periods (typically 28 Days). THIS ALSO IS VERY IMPORTANT. If you don't know, ASK, or don't use the program as it will not be effective!! This program is a guide based on scientific studies and rules that women have been using for years to gauge fertility, etc. However this program is not foolproof. The only way to guarantee you will not be having a baby in 9 months is to not have sex. No birth control method is 100% effective, and since you agreed to the EULA, we will not be held responsible for anything that happens to you. Also please be aware that my not using condoms, you are increasing your risk of contracting a sexually transmitted disease - trust us, these are not fun, and some do not go away and can kill you!

1. The days on the calendar that have the CROSED OUT CIRCLE icon are the days that you will need to use some sort of contraceptive device because your partner will be most fertile on these days. The days on the calendar that display the THUMBS UP icon are your partners least fertile days, and acccording to studies, are the days she is highly unlikely to become pregnant. The Day on the calendar that is RED is the day your partner should start her period (if this is not the case, then you may need to modify the data you entered).

NOTE: If you are one of the lucky guys to have a partner who has a very irregular period, this program will not work for you, or will not be as effective. Please consult your doctor for more information.
